[04] RESUME

Cybersecurity engineer · London, Ontario. Impact bullets are NDA-redacted — on purpose, not by accident.

DOWNLOAD PDF EMAIL ME

Everything below the company/title/dates line is under NDA, which is a normal condition of working in financial-services security and not something I'm going to pretend around. So: real employers, real titles, real dates — and where the impact bullets would normally go, you get the redacted version. If you're evaluating me for a role, the writing section is the part of this site that shows actual work instead of gesturing at it. This page is here for the recruiters and the record.

[01] EXPERIENCE

FIDELITY INVESTMENTS CANADA

Cyber Security Team Lead / Engineer 09/2023 – Present

[REDACTED – NDA] — something about SOAR playbooks and Sentinel automation that now runs without me in the loop, which is either the point of automation or slightly unsettling, depending on the day.
[REDACTED – NDA] — incident response, detection engineering, and enough KQL to have opinions about it.
[REDACTED – NDA] — leading a team means the pager still finds me, it just finds me second.

Senior Cyber Security Analyst (Detect & Respond · Insider Risk · Detection Eng.)

01/2022 – 08/2023
[REDACTED – NDA] — detection engineering, threat hunting, and a promotion to "Senior" that mostly meant writing the detections instead of just consuming them.

[REDACTED — NDA] — UEBA, playbook design, and enough incident response reps to stop flinching at 2am pages.

Cyber Security Analyst (Detect & Respond · Insider Risk) 06/2021 — 12/2021

[REDACTED — NDA] — incident response and threat triage in Defender XDR, ServiceNow tickets, and the specific kind of evidence handling that makes you paranoid about your own laptop.

AUTODATA SOLUTIONS (JD POWER)

Cyber Security Analyst 09/2019 — 06/2021

[REDACTED — NDA] — EDR and endpoint threat investigation, tuning alerts down from "everything" to "things worth waking up for."

[REDACTED — NDA] — DLP and incident response, in a role that taught me most alerts are noise until you build the thing that says otherwise.

TD BANK

IT Operations Analyst 10/2018 — 08/2019

[REDACTED — NDA] — DLP, device control, and enough security-policy work at a bank to understand why financial services moves the way it does.

[REDACTED — NDA] — patch management, which is the least glamorous job in security and one of the most important, and nobody tells you that going in.

BARJ IT SOLUTIONS

IT Analyst — Support 04/2012 — 04/2014

[REDACTED — NDA] — IT ops, ITSM, and support work, back when "incident response" meant someone's printer and a strongly worded SOP.

Relocation & Studies 04/2014 — 10/2018

Moved to Canada and went back to school — Fanshawe College, Information Security Management.

---

[02] CERTIFICATIONS

CISSP | GIAC GCIH | Microsoft SC-200 (Security Operations Analyst) | Microsoft MS-500 (M365 Security Administrator) | CompTIA Security+ | CCNA | Microsoft AZ-900 | CSPO | Lean Six Sigma Green Belt

No, that's not a typo — yes, I actually sat for Lean Six Sigma. Process improvement habits turn out to transfer well to detection engineering; both disciplines are mostly "find where the noise is coming from and remove it."
